Dear Big Interview Team,

Recording yourself answering "tell me about a time you failed" and then watching it back is a brave thing to ask a nervous college senior to do. From what I can see, that's exactly the moment Big Interview is built around, and it's a close cousin of the moments I've spent the last six years designing for: an H-E-B rep with a frustrated customer on the line, a pet owner reporting a lost dog, a patient trying to text a pharmacy about a refill.

Your posting asks for a product designer with advanced Figma and real front-end literacy. On the Figma side, my biggest recent project was a guided AI assistant inside the Salesforce tools H-E-B support reps use, designed with a content designer and a developer from decision-tree mapping through a prototype that every test participant completed. On the front-end side, I build my own portfolio and client sites by hand, HTML, CSS, and GSAP, and I use Claude Code and Codex to iterate in the browser. I'm comfortable reading a component before I redesign it.

Two things in your product caught my attention. The Answer Builder walks people through structuring a response before they ever hit record, which is the same "guided first, free-form later" approach that worked for the H-E-B assistant. And your captions translate into Spanish. I grew up in Roma, Texas, translating forms and phone calls for people who were perfectly capable and just weren't being spoken to in their language, so I'd want to make sure the Spanish-speaking student practicing at 11 p.m. gets the same clear feedback as everyone else.

I'd love to talk about how the PracticeAI follow-up questions are landing with students and what the team wants to build next. Thanks for reading.

Best,
Marcos Rios
