Dear **[Company]** Hiring Team,

A support rep at H-E-B has about forty seconds, with a customer on the line, to decide whether a missing delivery gets refunded. I spent months learning how reps actually make that call, interviewing associates and managers and mapping the decision tree, before designing a guided AI assistant inside the Salesforce tools they already use. In prototype testing, every rep completed their case. That project is the clearest picture of how I work, and it's why the Product Designer II role at **[Company]** caught my eye.

[Two or three sentences about the company's product and users, from its site or app, and the one thing that connects to Marcos's work. Example shape: Looking through the product, most of it lives on a phone in someone's hand while they're doing something else. That's the same design problem as the Noah's Ark report.]

Before H-E-B I spent two years at Dell designing B2B e-commerce for small-business buyers, including a checkout redesign with plainer wording and visible progress after interviews showed owners stalling mid-purchase. I wrote the specs and reviewed the implemented screens during the build, so I'm used to staying with engineering past handoff. This year I've been freelancing for small businesses, a pharmacy and a lost-pet app among them, and building my own sites with Claude Code and Codex.

I'm looking for a team where I can be a strong individual contributor on real products, which is what the II level reads like to me. I'd enjoy hearing what your designers are working on and walking through the H-E-B project in more detail. Thanks for reading.

Best,
Marcos Rios
